George J Shaw Construction performed construction of the cast in place concrete structure for the new St Luke's Lee's Summit Hospital located in Lee's Summit, Missouri. This facility includes several buildings in addition to the site construction.

The 250,000 SF structure consists of slab on grade, large foundation walls, and cast in place long form pan elevated floor slabs for multiple structures. Site construction included sidewalks, curbs, and light pole bases for the entire campus. GJS also performed some minor city right of way improvements as well. The project, as a whole, required a great deal of coordination of GJS subcontractors, as well as with other subcontractors on the project. All change orders were processed through the general contractor.
